sno	ANSWER KEY-PHYSICS-VIII	marks
1	cm(b)	1
2	A is correct but B is incorrect(c)	1
3.A	a)different tumblers have different volumes.changing the size of the container,changes the count. b)liquids should be measured using standard calibrated containers.	2
B	volume=lengthxbreadthxheight since breadth and height are also measurements of length,volume depends entirely on the fundamental quantity of length.	2
4	a)electrostatic force b)it is exerted by an electrically charged body on another charged or uncharged body.	2
5	Activity A—force causes a change in the shape and size of the toothpaste. Activity B—force changes the state of motion of the ball by bringing a moving object to rest.	2
6	a)density b)mass/volume	2
7	a)volume of the stone b)1lit=1000cm^3 0.02L=0.02x1000=20cm^3	2
8.A	At rest---wrt the moving lorry, the position of the plank does not change with time.(wrt-with respect to) in motion---wrt a stationary observer on the ground,the planks position changes continuosly as the lorry moves.	2
B	Wrt to the earth the object is at rest.however relative to an observer in space the earth is continuosly rotating on its axis and revolving around the sun,meaning the tree and the tied object are in motion.	2
9	a)the smallest value that can be accurately measured using instrument. b)1mm c)no.the thickness of a single sheet of paper is much smaller than the least countof the scale.	3
10A	A to B distance=100-0=100m time =2s-0s=2 speed=100/2=50m/s B to C distance=400-100=300m time=4s-2s=2s speed=300/2=150m/s	3

	C to D distance=450-400=50m time=6s-4s=2s speed=50/2=25m/s D to E distance=700-450=250m time=8s-6s=2s speed=250/2=125m/s E to F distance=750-700=50m time=10s-8s=2s speed=50/2=25m/s object covers unequal distance in equal interval of time.so it is non uniform speed.	
B	a)distance=3x400=1200m b)time=5x60=300s avg speed=1200/300=4m/s	**3**
