Chapter2

EQUAL TRIANGLES

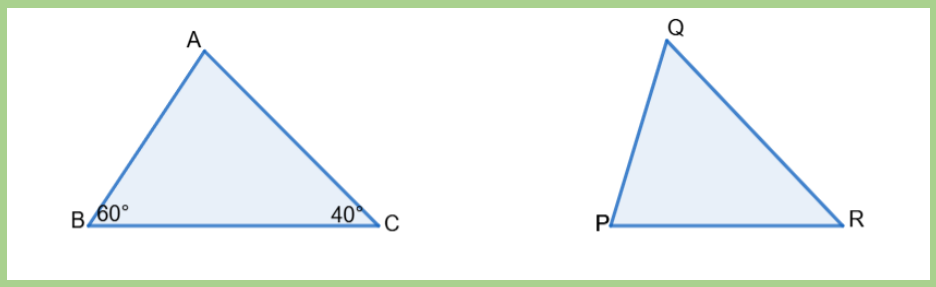

Work sheet 1

If the length of the sides of two triangles are the same, then the angles opposite to sides of equal length are also equal

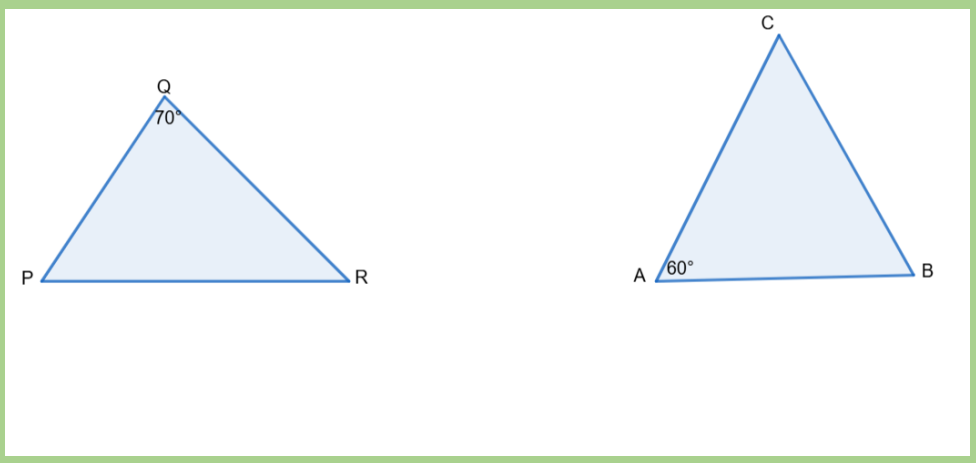

1) In each pair of triangles below ,find the pairs of equal angles

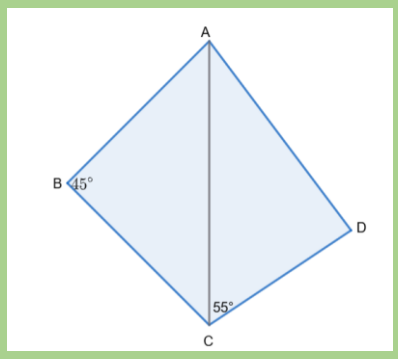

2) In the two triangles given beiow, AB =QR, BC=RP and CA =PQ .Find the<A of ∆ABC and all angles of ∆ PQR

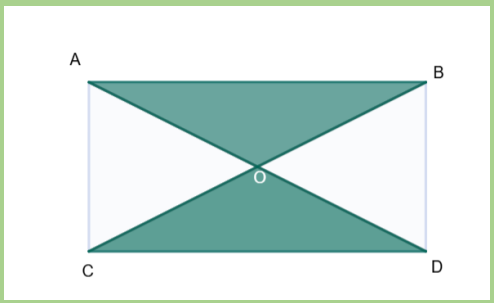

3) In the two triangles shown below, QR=AB, PQ=BC, RP=AC. Find the other two angles in each triangle

4) In the quadrilateral ABCD shown in the figure,AB =AD CB = CD . Find all the angles of the quadrilateral

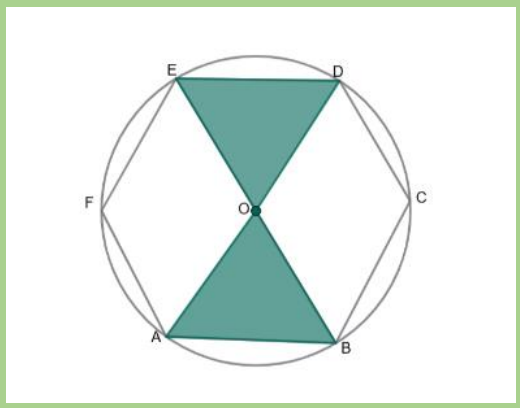

5) In the rectangle ABDC given below, the diagonal AD and BC intersect at O

Are the sides and angles of ∆AOB and ∆COD are equal? Why?

6) In the picture O is the centre of the circle and A,B, C,D are points on the circle

In the regular hexagon ABCDEF, Are the sides and angles of two shaded

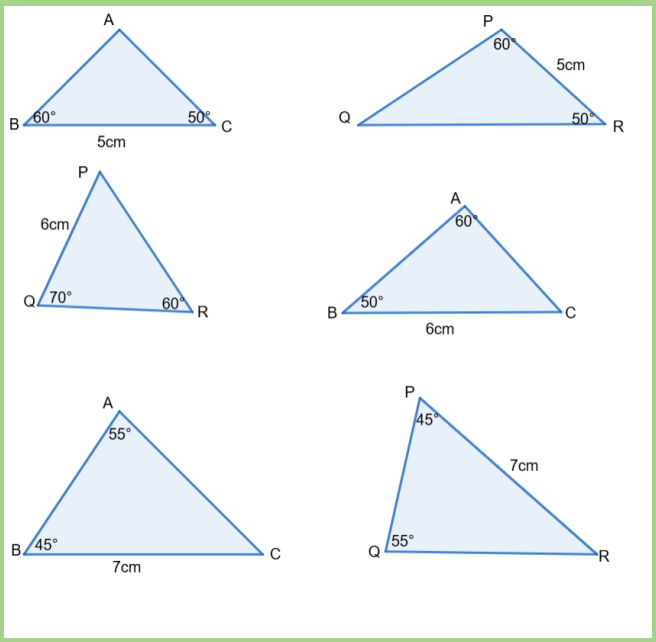

triangles are equal? Why?

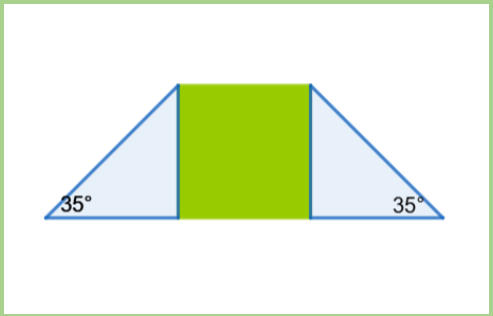

Work sheet 2

If in two triangles the length of one side and the two angles at its ends are the same, then the third angles and the length of the other two sides are also the same.

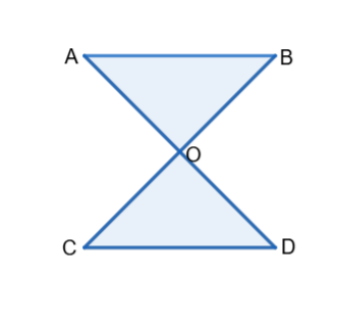

1) Find the equal sides in each pair of triangles below

2) In the picture, two triangles are drawn on two sides of a square. Are the sides of these triangles have the same length? Why?

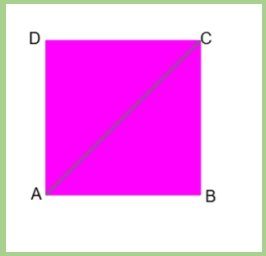

3) In the figure, AB and CD are equal and parallel. Are all the sides of Δ AOB and Δ COD equal? why?

Work sheet 3

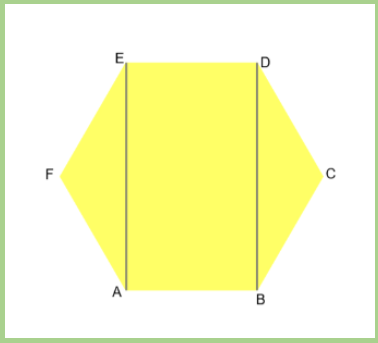

If in two triangles ,the lengths of two sides and the angle between them are the same then the length of the third side and the remaining two angles are also the same

1) In the picture ABCD is a square.

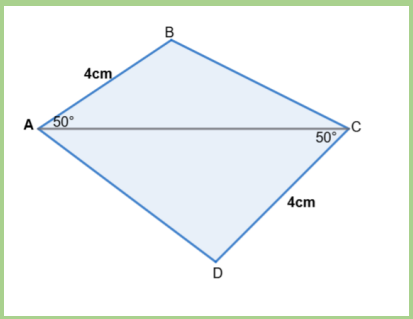

Are the sides of the two triangles formed by drawing the diagonal AC equal? Why? Find the angles of the triangles.

2) In the figure, ABCDEF is a regular hexagon (with equal sides and angles).

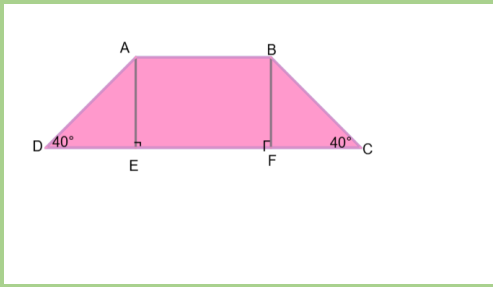

Are the lines AE and BD equal? why?

3) Is the quadrilateral below a parallelogram? Why?

4) In the figure below the lines AB and DC are parallel.AD =BC, <D= <C=40°. Are all the sides of ∆ADE and ∆BFE equal? Why ?

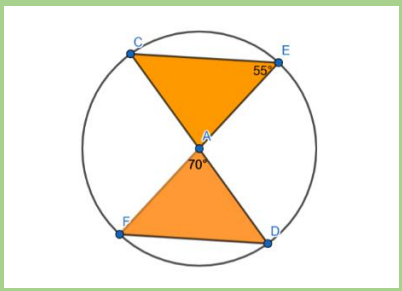

Work sheet 4

If two sides of a triangle are equal then their opposite angles are also equal

1) One angle of an isosceles triangle is given below, find the other two angles.

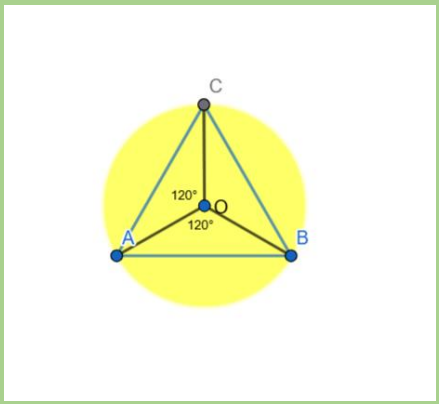

120°		
50°		
70°		
110°		
80°		

2) In the picture, A is the centre of the circle and C,E,F,D are points on the circle

Are the lines CE and FD equal? why? Find all the angles in triangles CAE anFAD

3) In the figure, O is the centre of the circle, and A, B, and C are points on the circle.

a) Are the lines AB, AC, and BC are equal?

b) Is △ABC an equilateral triangle? Why?
