Summative Assessment – Term II 2025-26
Class 8 BIOLOGY – Hints to Answers

by Rasheed Odakkal 9846626323

1. c) P-ii, Q-iii, R-i, S-iv
2. b). i and iii are correct, iiis incorrect **(2x1= 2)**

3. Agree. Lichen is a symbiotic association of alga-fungus/cyanobacteria-fungus. The ungus provides structure and protection, while the algae or cyanobacteria produce food for both organisms.
4. a). Since fungi do not have chlorophyll, they cannot perform photosynthesis. They absorb nutrients from dead and decaying matter.
   b). Some mushrooms are edibles. Yeast is used in baking and preparation of wine and alcohol. A few fungi cause diseases such as candidiasis and ringworm.
5. A clear envelope formed around the nucleus, and organelles became more.
6. A Although they may seem similar in some ways, Wolffia's genetic and evolutionary relationships are distinct. **OR**
   B. Although humans show differences among them, all humans share a common ancestor.

7.A. (a). A compound microscope has more than one lens.
   (b). Organelles are smaller than those that can be seen through a compound microscope with a magnification of 1000 times.

OR

B. (a). Meristematic cells.
   (b). Comparatively the meristematic cells have abundant cytoplasm, large nucleus but thin cell wall and are capable of continuous division.

8. a). (i) Biofertilizer.
   These are nitrogen or phosphorus fixing microorganisms.
   b). (ii), (iii) – Nano urea, Nano phosphate, Nano magnesium sulphate **(6x2= 12)**

9. a). Chordata. Presence of vertebrae and vertebral column.
   b). A species is a group of organisms that can naturally reproduce fertile offspring. Only tiger cubs can be born from a tiger. And so can leopards.
10. A .a). P- Golgibodies. Q- Mitochondria.
   b). Produce, store, and distribute energy from glucose.
   c). The plasma membrane does not allow all substances to pass through.

OR

B. a). X- Collenchyma, , Maintains the shape of plant parts.
   Y- Parenchyma, , Perform photosynthesis and food storage.
   b). In sclerenchyma, the cells have thick walls on all sides.
   c). Xylem and Phloem.
   Simple tissues consist of identical cells. Complex tissues contain cells of different sizes and shapes.

(2x3= 6)
