|---|---|---|
| | SECOND TERM SUMMATIVE ASSESSMENT 2025<br>STD VIII CHEMISTRY ANSWER KEY -EM<br>PREPARED BY RAVI P; HS PERINGODE, PALAKKAD | |
| Qn. No. | Scoring Indicators | Score |
| 1 | MgO (Magnesium Oxide) | 1 |
| 2 | C—c,a,b | 1 |
| 3. | They do not show metallic lustre and have low thermal/electrical conductivity. | 2 |
| 4 A<br><br><br><br>4 B | a) Gold is used for making ornaments.<br>b) Due to its sonority (property of producing sound).<br>OR<br>a) Used for manufacturing utensils.<br>b) It prevents the entry of air, moisture, and light. | 1+1 |
| 5 | a) carbon dioxide and water.<br>b) Light energy is converted into chemical energy. | 1 + 1 |
| 6 | a)Hydrogen<br>b)Carbon dioxide | 1 + 1 |
| 7 | a) Na<br>b) Fe<br>c) Natrium<br>d) Ferrum | 2 |
| 8 A<br>8 B | a) Solution (a) b) Solution (c)<br>b)Solution (4) b) Solution (1) | 1 + 1<br>1 + 1 |
| 9 | a) Carbon dioxide ($CO_{2)}$<br>b) Sodium hydroxide (NaOH)<br>c) Silver chloride (AgCl) | |
| 10 A | a) Because of its high reactivity.<br>b) Iron reacts with food substances to form other chemical products.<br>c) Gold does not chemically react with air.<br>Surface Coating: Apply paint, grease, or oil to the metal | 1 + 1 + 1 |

| | | |
|---|---|---|
| 10 B | surface to prevent contact with air and moisture.<br>Alloying: Convert the metal into alloys (such as stainless steel) to enhance its resistance to environmental factors.<br>b. The presence of acids: Chemical environments containing acidic substances speed up the oxidation of iron | 2<br>1 |
