Summative Assessment – Term III 2025-26
Class VIII BS BIOLOGY – Hints to Answers

by Rasheed Odakkal 9846626323

1. c). P-iii, Q-i, R-ii
2. b). X- Nucleic acid, Y- Lipid **(2x1= 2)**

3. a). X- Anaphase, Y- Metaphase
   b). During anaphase, the chromatids of each chromosome separate and move towards the two poles of the cell.
   During metaphase, chromosomes are arranged at the centre of the cell.
4. a). Leucoplasts, which are white or colourless plastids, help to store substances like starch,oil and protein.
   b). Chromoplasts contain pigments for imparting red, orange and yellow colours, that attract the animals for pollination and seed dispersal.
5. a). P- Identical twins, Q- Fraternal twins.
   b). Identical twins are formed from one zygote, which divides into two.
6. **A**. Food, clothing, shelter, fuel, medicines and biodiversity.
   Biodiversity and the stability of soil, water and air.
   Biodiversity in nutrient cycling, pollination, biological control and seed dispersal. (Any 2)

   OR

   B. In-situ conservation like National Parks, Wildlife Sanctuaries and Community Reserves. Avoid exploiting nature and natural resources beyond a limit. (any 2suitable points)
7. **A**. (a). Fungi. Mushrooms are edible / Yeast is used in baking and preparation of wine and alcohol
   (b). Because they absorb nutrients from dead and decaying matter.

   OR

   B. Bacteria play an important role in nutrient cycles like nitrogen fixation in the soil. Also helpful in our digestion process.
   A few bacteria can cause diseases.
8. a). Mutualism is beneficial to both organisms. Commensalism is beneficial to one organism, and neither beneficial nor harmful to the other.
   b). Parasitism / Predation / Competition (any one with a suitable example).

(6x2= 12)

9. **A** a). X- Sperm. Produced from testes. b). Ability to move with the help of tail.
   b). No, The chromosome number is reduced to half by meiosis.

   OR

   B a). X (ovary) produces estrogen & progesterone.
   b). Defects in Y (fallopian tube) prevents fertilization of gametes.
   c). The growth of embryo takes place in the Z (uterus).
10. A .a). Secondary consumer: Tiger, Trophic level: 3.
    b). No, some of the energy will be utilized by deer for its fuctions.
    c). The disappearance of any trophic level affect the the effective flow of matter and energy.

(2x3= 6)
